

Mobile Banking App Recurring Bill Payment Flow

UX Assessment Case Study

Vaishali Singh

May 2026

Project Overview

This case study focuses on designing a seamless and user-friendly recurring bill payment experience for a mobile banking application.

The goal is to help users automate their monthly electricity bill payments securely, efficiently, and with minimal effort while ensuring accessibility, transparency, and trust throughout the process.

Problem Statement

A user wants to set up an automatic recurring payment for their monthly electricity bill through a mobile banking application.

The challenge is to create a secure, intuitive, and accessible experience that allows users to automate payments with minimal effort while maintaining clarity, trust, and flexibility.

UX Goals

- Simplify recurring payment setup
- Reduce user effort and confusion
- Ensure transparency and trust
- Prevent payment errors
- Support accessibility and inclusivity
- Allow users to manage or cancel payments easily

Assumptions

- User is already logged into the banking app
- User has a valid bank account linked
- Electricity provider supports recurring payments
- Internet connection is available
- Pin/Biometric authentication is enabled

User Flow Diagram

This flow illustrates the process of setting up a recurring electricity bill payment, including validation, authentication, error handling, and support touchpoints.

User Journey Map

This journey map highlights the user’s actions, thoughts, emotions, pain points, and UX opportunities throughout the recurring bill payment setup process.

JOURNEY STAGE	Login	Select Biller	Enter Consumer No.	Authentication	Success
USER ACTION	Open App	Search Biller	Enter Consumer ID	Enter pin	Review Success
USER THOUGHTS	“I want quick set up”	“Hope I find my provider easily”	“Did I enter this correctly?”	“Hope i enter correct pin”	“Great it's done”
USER EMOTIONS	😐	🤔	😞	😐	😊
PAIN POINTS	None	Too many billers	Fear of incorrect no. entry	Incorrect Pin	None
UX OPPORTUNITIES	Easy Nav	Smart search + FAQ	Help text + validation	Enter Pin/ Option to use biometric	Clear Success

Wireframes & Prototype

The following wireframes demonstrate the recurring bill payment setup experience within the mobile banking application, focusing on usability, accessibility, validation, and seamless navigation.

Design Notes

- Step-by-step flow reduces user confusion.
- Inline validation improves input accuracy.
- Helper text supports consumer number entry.
- Pin verification ensures secure setup.
- Large touch targets improve accessibility.
- Clear success messages provide transparency.
- Support options are available throughout the flow.
- Consistent UI improves usability and navigation.

Thought Process & Design Decisions

While designing this recurring bill payment flow, my primary focus was to create an experience that feels simple, secure, and trustworthy for users. Since recurring payments involve automatic money deductions, I wanted users to feel fully informed and in control at every step.

I structured the flow in a step-by-step manner to reduce confusion and make navigation intuitive, especially for users who may not be familiar with AutoPay features. I also tried to minimize manual effort by assuming that biller information and consumer details could already be available from previous bill payments.

Special attention was given to user trust and error prevention. This is why the flow includes review screens, PIN verification, validation states, and support options such as FAQs and Contact Support. I also included management features so users can later pause, edit, or cancel recurring payments easily.

Accessibility and clarity were considered throughout the design by using clear labels, readable layouts, simple language, and large touch-friendly elements to ensure the experience remains inclusive and easy to use.

Additional Features & UX Improvements

- Pre-Deduction Alerts
Users receive reminders 48 hours before payment deduction.
- One-Tap Pause AutoPay
Quickly pause recurring payments during billing disputes or emergencies.
- Maximum Payment Limit
Users can set a bill amount threshold for safer AutoPay control.
- Smart Bill Insights
Monthly electricity usage and payment trend tracking.
- Biometric Authentication
Support for Face ID and Fingerprint verification.
- Low Balance Alerts
Notify users if account balance is insufficient before payment.
- Bill Limit Exceeded Notifications
AutoPay pauses if the bill exceeds the user-defined limit.
- Status Indicators
Active, Paused, and Failed payment badges for better visibility.
- Accessibility Support
High contrast text, screen reader compatibility, and accessible touch targets.
- Live Support Assistance
Quick access to FAQs, live chat, and customer support.
